AdminFlow Dashboard — Lighthouse Report

Month 4 · Frontend Architecture · Generated 2026-10-27 · Lighthouse 12.2.1 · Chrome (headless)

Target: Performance ≥ 90 on every page. Production build (`npm run build` + `vite preview`), authenticated session for protected routes.

Optimisations behind these scores

- Route-level code splitting with `React.lazy` — each page is its own chunk; forms/validation (react-hook-form + zod) never load on the initial request.
- Vendor chunking (react / data / forms) for long-term caching.
- Dependency-free SVG line chart instead of a charting library (~100 kB saved on the dashboard).
- System font stack — no web-font requests; inline SVG icons — no icon font.
- Skeleton placeholders with fixed dimensions → CLS ≈ 0.
- React Query caching + `keepPreviousData` to avoid refetch flicker; memoised presentational components.

The following pages contain the full Lighthouse report for each page (mobile first, then desktop).

Accessibility

These checks highlight opportunities to improve the accessibility of your web app. Automatic detection can only detect a subset of issues and does not guarantee the accessibility of your web app, so manual testing is also encouraged.

ADDITIONAL ITEMS TO MANUALLY CHECK (10) Hide

- Interactive controls are keyboard focusable
- Interactive elements indicate their purpose and state
- The page has a logical tab order
- Visual order on the page follows DOM order
- User focus is not accidentally trapped in a region
- The user's focus is directed to new content added to the page
- HTML5 landmark elements are used to improve navigation
- Offscreen content is hidden from assistive technology
- Custom controls have associated labels
- Custom controls have ARIA roles

These items address areas which an automated testing tool cannot cover. Learn more in our guide on conducting an accessibility review.
